# Technical advice.
# Practical project oversight.

## CAPABILITY STATEMENT

Asante Energy provides principal-led consulting for solar PV, battery energy storage, LNG, and hybrid microgrid projects. Assignments are shaped around the client's technical decisions, project stage, and delivery requirements.

## CLIENTS

Development banks | Utilities | EPCs | Independent power producers
Private islands | Resorts

## CORE SERVICES

**Technical advisory & reviews**
System concepts, equipment selection, LNG fuel/generation interfaces, technical proposals, design coordination, and constructability.

**Owner's engineering & project oversight**
Technical coordination, contractor interfaces, quality reviews, site observations, and progress reporting.

**Procurement & tender support**
Technical specifications, procurement document reviews, bid evaluation, and scope clarification.

**Commissioning readiness & closeout**
Test procedure reviews, readiness assessment, QA/QC documentation, and handover support.

## REGIONAL EXPERIENCE

Selected experience includes technical advisory in the Bahamas; BESS owner's engineering in Guyana; balance-of-system delivery and project/construction management on the Cruzan microgrid in the U.S. Virgin Islands; and engineering and partial-delivery management on the Chub Cay microgrid expansion.

## ENGAGEMENT OPTIONS

Focused technical reviews, milestone support, and advisory retainers. Deliverables, required information, review limits, site visits, and specialist inputs are agreed for each assignment.

## PRINCIPAL

**Michael Vance, President**
Electrical industry and renewable energy experience across consulting, engineering, project management, and construction management in the Caribbean, North America, and Africa.

Experience includes personal and company assignments with different contracting entities and roles. Relevant references and entity-specific qualifications are established for each procurement. Potential conflicts are assessed before engagement.
